- Bedside power - 1 x 12V socket and dual USB port

step 2

The TOURING TENT

Patent Application 2016100958

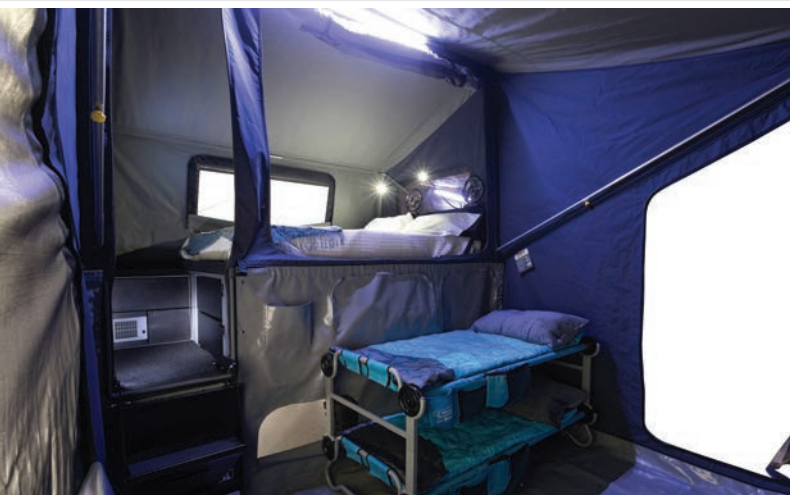

Full Set Up 3 min

The camper trailer has been re-imagined. We don't believe a quick set up camper trailer should be based on compromise. With a market that is flooded with "touring style" camper trailers, we boldly redesigned how the conventional camper is used. Why should you sleep on an undersized foam mattress & sacrifice the comforts, or have to leave the bikes, boats and outboards behind just to save time when you set up? With the Touring Series, you can have all this.

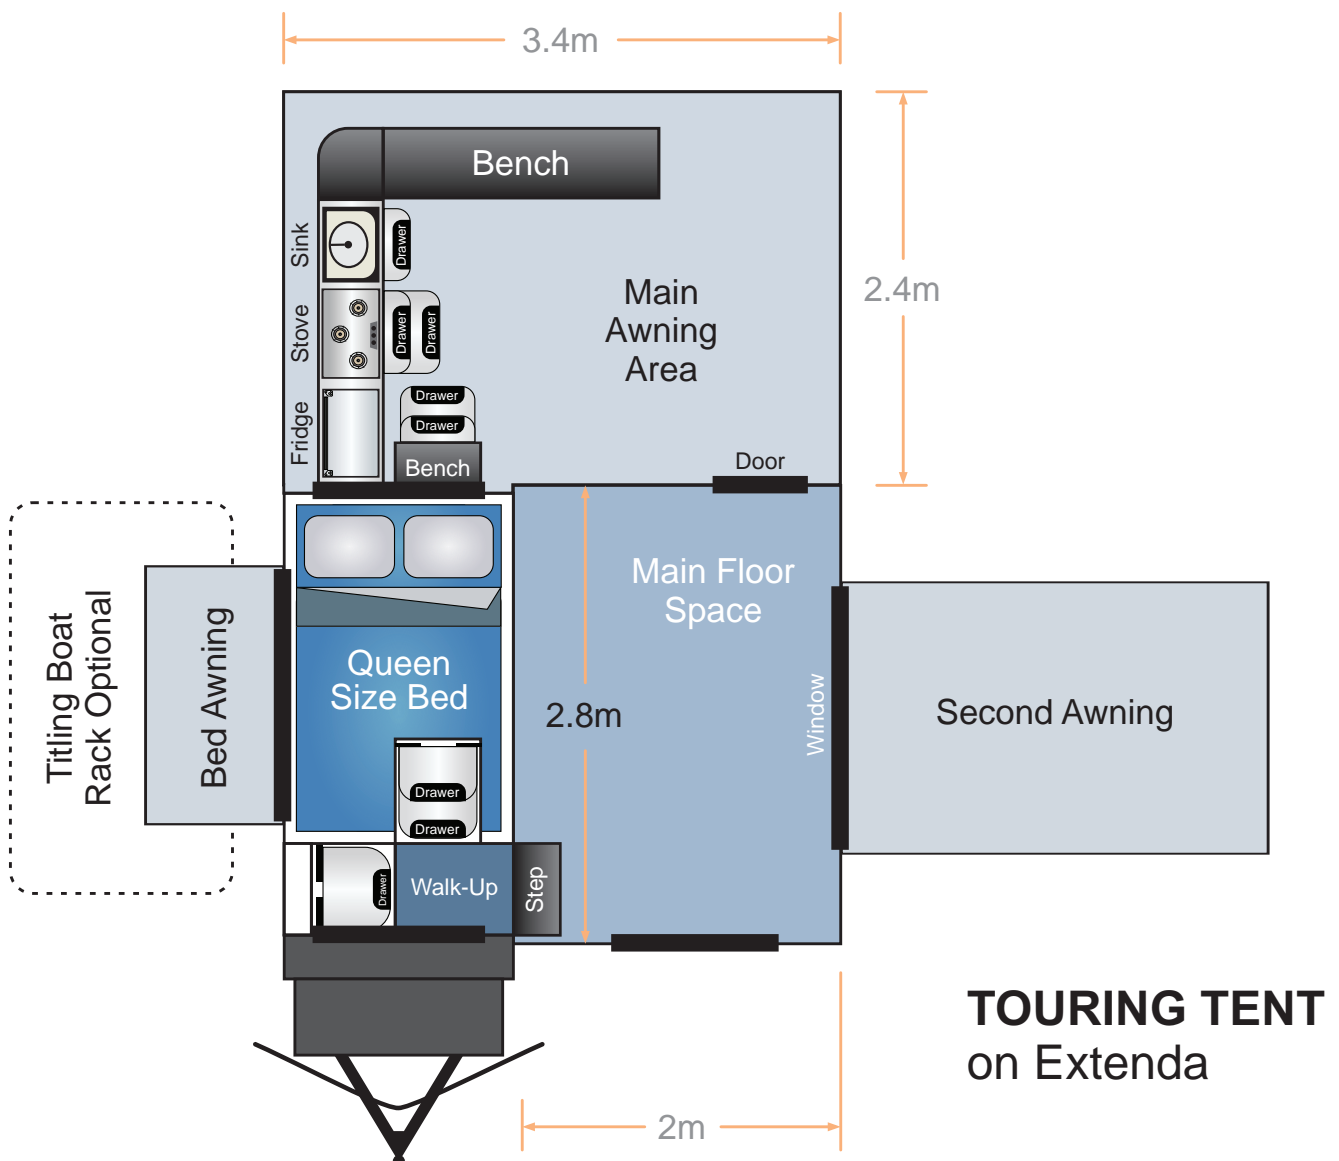

With strict criteria from both our sales representatives and customers seeking maximum comfort and storage with a minimum effort set up, our design team got to work. Our patented tent and awning design paired perfectly with our comfortable features and limitless storage on our Explorer & Extenda range.

The Touring Series tent can be set up for a quick stay after a long day on the tracks, for the whole family or anywhere in between due to its modular design in under 3 minutes. The quick setup is owing to the patented pole system for the tent and awning, this design eliminates the need to attach any further poles to support the canvas. It's as simple as extending the poles into the correct position and using the 2 quick clip guy ropes to anchor it down. Instead of following the trend of a detached kids room, we fitted the tent with separate walls and floor that attach to the main tent frame allowing you to set up as little or as much as you want adding privacy or protection from weather.

'Under 3 minutes,
under a million stars'

- Australian Wax Converters Dynaproofed canvas
- 2m x 2.2m (Explorer) or 2m x 2.8m (Extenda) floor area
- 2.4m attached awning with patented pole design including integrated spreader bars (all awning poles fold away with tent)
- Detachable kitchen wall
- Drop down privacy screen
- Large full length windows with internal canvas flaps
- 2 x lower wall vents to maximise airflow
- Zip access to mudguard box
- Unique zip gutter design provides excellent water ingress protection
- Bucket style zip in floor
- Unique internal pole design
- Removable modular walls & floor
- Tropical roof
- Fully sealed travel cover with adjustable pulldown straps to minimise flapping & dust/water ingress
- Quality poles, pegs & ropes needed for complete set up
- All stainless-steel fittings on tent

step 3 customise your camper

'A kitchen fit for a chef'

In modern homes the kitchen is one of the most used rooms in the house, why should your camper be any different. Basing our designs on maximising bench space and storage as well as a layout that works, we have created our new range of CAD engineered aluminium kitchens. The new range features an aluminium monocoque construction reducing internal weight by up to 25% whilst retaining strength and usability.

The impressive powder coated kitchen is fitted with the latest in Dometic stainless appliances, an Australian made 60litre fridge freezer and electric water pumps. Quick connect plumbed gas and water lines provide maximum convenience when camping. The dedicated drawers for cutlery, pots & pans, plates, bowls, glasses and mugs are all fitted with Italian soft close runners. The additional easy to access pantry with extra drawers provides unmatched storage and bench space.

The return bench increases the footprint of the kitchen in a matter of seconds, the whole unit supported by adjustable rust free aluminium legs.

Take your bikes camping & beyond

The ISI bike rack allows for easy storage of 2 or 4 bikes on your Trackabout without having to load & unload bikes every time you need to access the trailer.

The clever design also features an optional vehicle hitch that allows you to fit the rack to the car and explore the tracks nearby camp or a nice Sunday ride at home.

Boat rack? The anything rack!

Store boats, kayaks, firewood, mates' swags, roof rack bags, paddle boards, the list goes on.

When you don't feel like unloading when you get to camp, simply fold it out of the way with the assistance of the gas strut and set up the tent like it's not even there.

Speed up your adventures

The stainless steel outboard loader sits snugly in behind the stone guard protecting the motor from rocks and corrugations.

Like the rest of the trailer, the loader is designed to last, featuring laser cut, stainless steel componentry. Just undo the latch and the motor simply pivots into a ready to load position.

Playing in the mud is fun. Sometimes

Get yourself out of a sticky situation with these genuine Maxtrax.

These mounts are designed to carry up to four Maxtrax, featuring a lockable design, they are mounted on the front toolbox for ease of access whenever you need them.

About Us

'A true Aussie Icon'

Trackabout Off Road Campers are not only an industry leader in design, innovation, quality, and service but also one of the longest standing Australian manufacturers in off-road camper trailers. What once started in 1998 as a small business based in Brisbane's south has grown into a manufacturer that provides off road campers nationwide and beyond.

At Trackabout, every model and every option are the result of obsessive attention to detail and countless hours of "real world" RnD. Every element is thought of, and no detail is too small for our attention. This means our product and its modular options work seamlessly across our range.

A key point of focus for the design at Trackabout Campers is the evolution of our products. A lot of emphasis is put on our customers off road needs which have allowed us to develop our product over many years. The basic principle of our product hasn't changed over the decades, solid, easy to use Australian made campers that will follow you up and down any journey you embark on. With a company founded and staffed by campers, evolution comes naturally.

With state-of-the-art technology behind us, advancements through computer aided design, laser cutting, and redefined assembly procedures have allowed us to maximise features, storage & usability therefore adding value for our customers. All our components are finished to the highest standards, allowing aesthetics and practicality to bond effortlessly.

Trackabout has continued to prove itself as one of the best camper trailer manufactures in Australia forging a reputation based on innovation, quality and comfort. So, make sure you have the best behind you!
